CEInq

Simplify the information flow

Equip thin clients and PDAs with CEInq and benefit from the modular data capture functionality.

CEInq provides bar code integration for any application running on Windows CE or Pocket PC.

Get it for easy access to bar code info, to web solutions, host access software and Citrix™ solutions.

Freefloat CELinq transfers data from any serial device, bar code scanners, 2D scanners, scales, or other RS-232 units, to the application.

Let CELinq be the glue between the application and the hardware. Become independent of manufacturers APIs.

Get rid of all problems connecting an RF-scanner or wired scanner to a forklift PC. Use RS-232 and avoid all the problems related to keyboard connected scanners and variations in power supply.

Key features:

- Sufficient buffer to handle large 2D-codes such as PDF417, QR-codes, and DataMatrix
- Data can be transformed into any keystroke
- Char by char translation
- Keyboard buffer

Operating systems supported:

- Windows CE 4
- Windows CE 5
- Pocket PC

For Windows 2000 or Windows XP use Freefloat WLinq.
